## Reusable blocks

🏠 > Reusable blocks

How to use Reusable Blocks

Great use cases for reusable blocks:

- Blocks you use repeatedly throughout your site.
  - Tiles
  - Elements you've added styles to
  - Groups of Blocks used to create a layout
 - Difficult to reconstruct layouts.

Adding a Reusable Block

Use the toolbar dropdown to add a block or group of blocks to "Reusable Blocks"
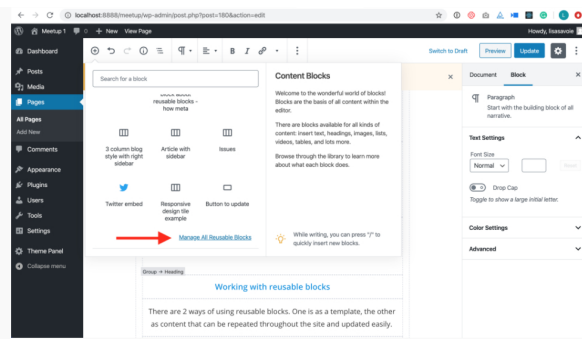

Managing Reusable Blocks

Manage reusable blocks from the "Add Blocks" or from the inspector

- Can edit the block (the edit will apply to all instances of

the reusable block), trash, or import/export as a JSON file.

Working with reusable blocks

There are 2 ways of using reusable blocks. One is as a **template**, the other as **content** that can be **repeated** throughout the site and updated easily.

- First, when creating a reusable block, make sure you've selected the entire block
- If using as content that is repeated, keep as a reusable block
- If using the block as a template, convert to a regular block

You've created a block. Now make it reusable. Reusable blocks can be used on multiple pages. They can be imported and exported as JSON files.

(Make this block reusable, template demo. Can't be seen from the published page)

You can use reusable blocks to make updating across the site an easy process.

Since this is a reusable block, if I change the link, it will change the link on all buttons of this type on the site.

Convert the block to a regular block and make all the changes you like
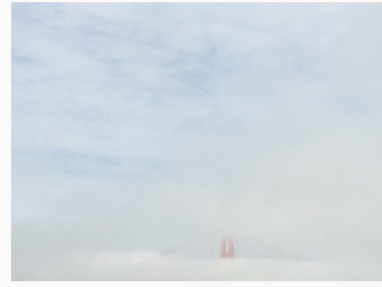

Reusable Block:

Header

This is a 3 column block used to make tiles or cards.

Header

You can change the number of columns and their sizes.

Header

This is also a reusable block which can be edited or repeated.

Header

This is a 3 column block used to make tiles or cards.

Header

You can change the number of columns and their sizes.

Header

This is also a reusable block. But convert to a regular block first!

Convert to a regular block and make changes:

Lisa
Speaker

This is a 3 column block used to make tiles or cards.

Karissa
Organizer

You can change the number of columns and their sizes.

Travis
Organizer

This is also a reusable block. But convert to a regular block first!

Blocks like these can cave or
Blocks like these can be grouped together

They can then be moved together or used as a reusable template

A bunch of text about your site that is well written and really conveys the essence of your brand. A bunch of text about your site that is well written and really conveys the essence of your brand. A bunch of text about your site that is well written and really conveys the essence of your brand.
